Work in Progress

2020/02 (exp.)	Barbieri, Guerini, Napoletano *Synchronization of Government Bond Yields in the Eurozone* We study a Bloomberg dataset of daily government yields for different bond maturities and for eleven Eurozone countries over the last two decades. Our approach to synchronization relies on Random Matrix Theory.
2020/03 (exp.)	Fontanelli, Guerini, Napoletano *International trade and technological competition in markets with dynamic increasing returns* We build a simple multi-agent model of industrial dynamics and intra-industry trade with domestic and foreign firms competing for market shares in decentralized markets. The model aims at explaining in a reduced form how international trade patterns and the main stylized facts of trade and firm dynamics can emerge out of the interaction of firms with different competitiveness and size..
2021/03 (exp.)	Pallante, Guerini, Napoletano, Roventini *Financial Contagion and Macroeconomic Stability: An Agent-Based Approach* Financial contagion and systemic risk have put into question whether a well developed financial sector may self-regulate itself, and guarantee market resilience to shocks. This work analyses the interaction between the two in a model characterized by endogenous technical change and Mynskian credit dynamics.
2021/05 (exp.)	Guerini, Napoletano, Gaffard *Borrowing Constraints, Banks Time-Horizons and the Evolution of Industries* In this paper we employ a new agent-based model to study the role that credit has on the evolution of an industry organizational structure and we use empirical French firm level data to reconcile the model with the empirical evidence.
